

FOR IMMEDIATE RELEASE

Versasec Releases vSEC:CMS T4.1 Smart Card Lifecycle Management

New virtual smart card, improved user interface, and better management of certificates added to leading smart card management system.

NEW YORK, July 8, 2015 -- Versasec, the leader in smart card management systems, today announced the vSEC:CMS T-Series version 4.1. The new version's enhancements include features designed with the large community of active users in mind.

Versasec's vSEC:CMS products provide enterprises with all the software tools they need to administer and manage the lifecycle of smart cards securely and conveniently. The product suite consists of versions designed for both management systems and smart card tools, with offers that meet every organization's requirements for managing its smart cards.

Some of the new features in vSEC:CMS T4.1 include the following:

- New virtual smart card: vSEC:CMS Virtual Smart Card – two factor authentication using the trusted platform module (TPM) with support for Microsoft Windows 7 and later
- New user interface: larger lifecycle diagram, additional scrollbars, images for smart card readers, and form validation – all of which improve upon the vSEC:CMS user-friendly operator interface
- Management of non-smart card certificates (such as web server SSL certificates), providing control and management for the issuance and renewal of certificates across the organization
- New certificate authority connections:
 - [neXus Public Key Infrastructure \(PKI\)](#)
 - [Verizon UniCERT CA](#)

The new version is available now for evaluation via download at www.versasec.com.

"We're continually working on making the vSEC:CMS suite the only choice for companies of all sizes that need smart card management services. This latest version makes use of a TPM as an advanced smart card, which results in a new enabling security credential that connects to everything smart cards already do, such as system logon, VPN and secure email. By using TPM, companies can continue using Microsoft Windows 7 and receive all the security benefits that newer Microsoft operating systems have," said Joakim Thorén, CEO, Versasec.

About Versasec

[Versasec](#) is a leading IT solutions provider in the identity and access management space with focus on easy deployment of smart cards with innovative smart card management systems. Our customers are organizations that demand high security and ease of use. Our state of the art solutions enable our customers to securely authenticate, issue and manage user credentials, such as smart cards, more cost efficiently than other solutions on the market.

Our mission is to provide solutions that are affordable and easy to integrate, thus allowing organizations of all sizes to implement high levels of security. We also offer first class support, maintenance, and training.
