

Product Release

Introducing vSEC:CMS Version 6.12

SERVER

Microsoft Entra ID FIDO2 orchestration: Versasec and Microsoft's longstanding partnership has culminated in a collaborative solution that enables enterprises to leverage the powerful capabilities of FIDO2 device-bound passkeys, along with the added benefits of comprehensive life-cycle management, centralized control, and auditability. Adding a new HSM technology partner, Fortanix. Expanded integration with Entrust Identity as a Service (IDaaS): FIDO2 security device issuance for existing users and security device re-issuance.

USER

User improvements for multi-credential use case environments.

SECURITY DEVICE

Management of FIDO2 security devices over NFC is now available. Offers an option for those wanting to combine physical access and FIDO2. Now supporting the latest Yubico YubiKey firmware: 5.7.

Added to Versasec supported credentials: Thales SafeNet eToken (Fusion NFC PIV, Fusion FIPS, FIDO usb c), Thales SafeNet IDCore 3121 FIDO, Token2 PIN+ FIDO2 Security Keys series.

Presenting Versasec FIDO2 Enterprise: FIDO2 management capabilities.

New management capabilities include PIN unblock, allowlist, reset protection, and more. Now, organizations and businesses can extend Versasec's powerful and seamless credential management features of automation and orchestration to FIDO2 passwordless authenticators.
