# Centralized FIDO2 Management and Transition of Active YubiKeys

**vSEC:CMS®**

## Centralized FIDO2 Control in Agent App

We're adding your favorite FIDO2 device management features to the light version app, the vSEC:CMS Agent:

- Remove passkeys from managed devices,
- initiate fingerprint enrollment, and
- perform application resets.

Get ready to ensure a secure and efficient helpdesk experience and maintain a strong security posture.

**yubico**

## Transition of Active YubiKeys

Transition active YubiKeys (PIV application only) to vSEC:CMS management. This process automates the wipe of all prior access credentials and replaces them with new, uniquely diversified PKI keys and certificates. This feature ensures a seamless management transition to vSEC:CMS. Say goodbye to individual manual wipes of YubiKeys.

**THALES AUTHENTREND swissbit**

## Expanded Hardware Token Support

This month's release expands our supported list of hardware credentials to include three new tokens: the Thales SafeNet eToken FIDO NFC, the AuthenTrend ATKey.Card.NFC, and the Swissbit iShield Key2. This integration allows you to leverage these devices within your identity infrastructure, providing enhanced flexibility and security for your users.

## General Performance and Hardening Improvements

Significant under-the-hood enhancements to improve the overall performance, stability, and security of our platform. We have executed a focused hardening effort to strengthen the system against potential threats and reduce the attack surface. These general improvements lay the groundwork for a more robust and resilient platform, ensuring higher reliability and a more secure environment for managing your digital identity infrastructure.
