Product Release
Introducing vSEC:CMS Version 6.10

CREDENTIAL
Our list of supported credentials has been extended to include Thales IDPrime FIDO BIO, Thales eToken 5110+ CC (940C), Ensurity ThinC-AUTH BioPro, and G+D StarSign ® FIDO Card.

USER
Performance improvements on caching and vSEC:CMS User application startup.

Web Start for user self-service tasks.
Credential management templates can now be filtered in vSEC:CMS User application.

Administrators can now align PIN changes with other credential tasks.

AGENT/ADMIN
Store and sync custom data from Active Directory for user credentials stored in vSEC:CMS repositories. The information can then be queried and available for reporting.

Elevated operator roles can now override permission checks when revoking credentials.

SERVER
vSEC:CMS now supports managing FIDO CTAP 2.1 credentials.

Customers can now integrate the Yubico YubiHSM 2 to protect vSEC:CMS master key(s).

Capture and add custom user data to credentials during issuance, with the ability to modify it afterward.

Web Start for User Self Service Tasks
Users can now initiate self-service tasks from a website, facilitating self-service tasks including self-issuance and PIN unblocks.

Capture and Add Customer User Data to Credentials
This feature adds another level of security, for example, for officers to validate identity against a text, a physical characteristic, or the employee's personal information.

Download the latest - vSEC:CMS Version 6.10!
New and existing customers are now able to download the newest version, and enjoy the new features:
