SUMMER EDITION 2026

Introducing On-Prem FIDO Authentication Server: vSEC:CMS Identity

On June 18, 2026, Versasec announced the release of vSEC:CMS 7.4, which includes the launch of vSEC:CMS Identity an advanced multi-factor authentication server designed for both vSEC:CMS and vSEC:CLOUD.

Designed for efficiency, vSEC:CMS Identity can be deployed on-premises, air-gapped, or within a private cloud. The flexible architecture ensures absolute data sovereignty, allowing organizations to maintain complete control over their security infrastructure without outsourcing trust to external cloud identity providers. Key Innovations in vSEC:CMS 7.4

- Instant FIDO2 Passkey Issuance
- Frictionless Hybrid Directory Orchestration
- Short-Lived Temporary Domain Passwords
- Full lifecycle management for the Yubico Security Key Enterprise Edition via YubiKey as a Service (YaaS)

Latest news from the Tech Industry

PIV Cards: From PKI to Modern Identity

For years, organizations have relied on usernames, passwords, OTP, and SMS-based MFA to secure access to systems and facilities. But as cyber threats evolved, identity security needed something stronger, more standardized, and harder to compromise. That evolution led to the rise of the PIV card.
